

Origin scientific colour examples

Synthetic data | native editable Origin plots | colours chosen by data role

01 Half violin + points

Tol bright

02 Split violin

Blue / vermillion

03 Violin + box

Tol muted

04 Violin + points

Tol vibrant

05 Ridgeline

Tol high contrast

06 Grouped box

Blue / vermillion

Origin scientific colour examples

Synthetic data | native editable Origin plots | colours chosen by data role

07 Nested bars

Deep line / light fill

08 Paired points + intervals

Blue / vermilion

09 Trajectory + interval band

Dark outlines / 22% colour fill

10 Shared-scale trellis

Tol bright

11 Split-cell heatmap

vik | difference (synthetic units)

12 Violin + observation sticks

Tol high contrast

Scientific colour selection

Selected options from the 40-palette offline library

CATEGORY / GROUP

tol_bright		3-7 groups
tol_vibrant		strong categorical colours
tol_high_contrast		three groups
tol_muted		up to nine groups
tol_pale		fills only

MAGNITUDE / ORDER

navia		moisture or intensity
batlow		general magnitude
cividis		ordered values
glasgow		ordered multi-hue
lipari		high-range intensity
cmocean_rain		precipitation

SIGNED DIFFERENCE

vik		blue to red
broc		blue to olive
bam		magenta to green
cmocean_balance		blue to red

PHASE / DIRECTION

romaO		cyclic phase
cmocean_phase		cyclic direction

PAL files contain colours only. Set units, limits, centre and missing values in Origin.

Sources: Scientific Colour Maps / Paul Tol / cmocean / Matplotlib. See the source index.

Colorbars with a clear meaning

Illustrative scales: replace ranges and units with the actual study definition.

01 Non-negative magnitude

Use a sequential palette; distinguish zero rainfall from missing data.

02 Positive and negative change

Place zero at the neutral centre; share the range across comparable panels.

03 Cyclic direction

Use a closed colour cycle; specify whether a vector points to or comes from a direction.

Origin workflow

Import PAL in Color Manager > set Colormap/Contours levels > adjust Color Scale labels.

Use 3-6 major labels where readable. Keep minor labels off; retain real overflow indicators.

Categorical violins, boxes and paired points use legends, not a continuous numerical colorbar.
